

Insulated Roller Garage Doors

Remote Control

SECEUROGLIDE™

SECEUROGLIDE™ COMPACT

SeceuroGlide

The SeceuroGlide system

SeceuroGlide insulated roller garage doors combine the convenience of power operation with the advantage of smooth vertical opening. This allows you to park right up to the door, whilst the pocket size transmitter enables you to open and close the door from inside your car. Meanwhile the tightly coiling curtain creates more space inside your garage to accommodate high top off-road vehicles or people carriers.

Every door is made-to-measure in accordance with ISO 9002 so that it fits your garage perfectly. Manufactured from strong corrosion-resistant aluminium with an insulating core, SeceuroGlide is available in a range of ten stylish finishes. These durable factory-coated finishes eliminate the need for painting and ensure that your door continues to look good for years and represents a sound investment for your home. Once installed, SeceuroGlide is very low maintenance and comes complete with a comprehensive 2 year guarantee on all manufactured parts and 5 years on the Somfy motor for total peace of mind .

This outstanding, yet attractively priced insulated roller garage door concept has been carefully designed and refined to improve on many of the virtues of both conventional steel roller doors and sectional overhead doors.

- Vertical opening roller design maximizes drive-through height while saving space both in the garage and on the driveway.
- Double-walled aluminium construction is exceptionally strong.
- Insulated curtain and unique brush draught seals protect against cold and noise.
- Remote control operation and automatic locking deliver the ultimate in convenience and security.
- Mini transmitter units use state-of-the-art rolling code technology for added security.
- A glazing option is available to allow natural light into the garage.
- Manufactured to ISO 9002 quality standard and backed by a two year warranty for peace of mind.
- Choice of up to ten tough low maintenance finishes.

SeceuroGlide... better at every stage

Operation

Opening the garage without leaving your car will keep you dry and secure, whilst vertical operation allows you to park right up to the garage door without wasting valuable drive space.

Construction

Achieves maximum drive-through height to accommodate off-roaders and people carriers. The individual aluminium slat construction is exceptionally strong yet can be easily repaired if damaged.

Design

Our roller design frees valuable overhead storage space which is wasted by traditional up-and-over or sectional garage doors. There is no need for keys as it locks automatically when closed.

Insulation

Our tough double skin curtain is insulated with high density CFC-free foam to reduce heat loss and sound transmission. An innovative brush seal achieves superior draught proofing.

Somfy power

Somfy tubular motors are regarded as world leaders and power all electrically operated SeceuroGlide doors. A manual override facility ensures that all doors can be raised from inside the garage in the event of power loss.

Maximum safety

All automatic SeceuroGlide doors are equipped with an intelligent safety photocell to stop operation if an obstruction in the path of the door is detected.

Secure control

SeceuroSmart receivers come complete with an integral courtesy light and two mini transmitters with high security rolling codes. A multi-channel version (blue) is available to control up to four doors and comes with one transmitter as standard.

SECEUROGLIDE

The ultimate in stylish luxury and effective security is at your fingertips with SeceuroGlide insulated roller garage doors. They signal the end of driveway struggles in all weathers and the beginning of peace-of-mind and total convenience from the moment you touch the remote button and see the door effortlessly rise at your command.

SeceuroGlide is robust, reliable and offers secure protection for your car and home. Aluminium slats lock into position to resist attack by intruders and advanced insulation and brush sealing make the door as weatherproof as it is secure. Vertical opening means you can make maximum use of your drive space and park safely only inches from the door.

The SeceuroSmart control unit uses secure state-of-the-art rolling code technology and allows you to operate and lock the door remotely. During a power failure, SeceuroGlide can be operated manually from inside the garage. An optional external override is also available if required.

SeceuroGlide can easily accommodate curved or arched entrances.

Choose from our stylish finishes

The Mahogany and Golden Oak Textured Woodgrain finishes are designed to match the latest generation of wood effect double glazing units.

Where specified, bottom and vision slats along with guides may be a slightly different shade to the curtain.

¹Medium Simulated Woodgrain doors supplied with brown bottom and optional vision slats as standard.

²Mahogany & Golden Oak Textured Woodgrain supplied with matching bottom rail and brown inner face, guides and endplates as standard.

End plate, Guide rail & Slat profiles

Specially designed heavy duty steel endplates give greater strength and security.

GUIDE RAIL PROFILES

Brush strips on the guide rails and the door's insulated curtain reduce noise, wear and improve weatherproofing.

SLAT

SECEUROGLIDE COMPACT

Where the headroom inside your garage is particularly limited, a new Compact version of SeceuroGlide is now available which requires only 8" (205mm) above the opening height. Using a 55mm insulated aluminium profile opening widths of up to 3 metres can easily be accommodated.

The SeceuroGlide Compact package includes a neat 90° fascia that completely conceals the back of the door's coil, so drive through height permitting, it can be installed partly or completely into the garage door opening.

SeceuroGlide Compact is also suitable for external applications as all exposed components are made from corrosion resistant aluminium and then powder coated to a high standard.

Where required an optional 45° canopy can be supplied to completely enclose the curtain's coil. These features mean that SeceuroGlide Compact looks and performs just as well when fitted onto the outside of your garage, as it does when fitted on the inside.

- Suits both internal and external applications.
- Only 205mm headroom required.
- Slim 60mm guide rails.
- Low maintenance.
- Fully painted finish.
- Insulated curtain.
- Available in White, Brown and Fir Green ONLY.

SeceuroGlide Compact colours

Bottom slats along with endplates, box and guides may be a slightly different shade to the curtain colour on White and Fir Green doors. Brown doors are supplied with dark brown bottom slats, end plates guides and box.

Vision slats are not available on the Compact.

Guide rail & Slat profiles

SLAT

Vertical opening roller design maximizes drive-through height while saving space both in the garage and on the driveway.

Technical features and installation options

Fully insulated curtain

Each curtain is assembled from twin-walled aluminium slats that are insulated with CFC-free foam to reduce heat loss and sound transmission. Glazed vision slats are also available.

The market leading Alulux insulated and curved slat profile has rounded edges which minimise the likelihood of marking over time as the slats coil together during opening and closing. The inclined profile also helps shed rain water and does not act as a trap which can lead to water being deposited inside the garage when opened on rainy days - a common problem with other designs.

Precise tolerances and the "Open Hook" design of the slat make it very strong and enable the door to coil tightly, resulting in a very compact coil which presents minimal intrusion into the garage space.

The extruded bottom slat with rubber seal maximises rigidity and helps avoid distortion of the curtain on uneven floors and in windy conditions.

Secure locking

The comb locking mechanism (Patent Pending) ensures the door locks automatically and the curtain is held securely, resisting attempts to lift the door by force.

The 102mm door axle incorporates the locking collar and bolt which, as the door moves to the closed position, engages with the lock comb and secures the door as shown in the sequence below.

1 Face Fix - Installation

Here the inside edge of the guide rails line up with the brick opening. However the flush fitting end plates and flat design of the guide rails make the size of the door and positioning of the guide rail less critical. A subframe is not required unless the structure is very uneven. Moreover, if maximising the width of the opening is not important, an existing subframe can be retained with the door installed in line with the timber opening. If required the guide rails can overlap into the opening by up to 25mm on each side.

2 Reveal Fix - Installation in the Door Opening or Between Walls

If the door is manufactured to the exact opening width, it can be installed within the aperture. This may also depend on the available headroom above to accommodate the coil. If the coil is going to be visible from the outside, an external 90° fascia will be required.

3 Headroom Requirement

The small coil diameter is one of SeceuroGlide's strengths. Just 300mm headroom is required inside the garage for doors up to 2500mm opening height and 350mm for doors up to 3500mm opening height.

Where the available headroom is severely restricted SeceuroGlide Compact requires just 205mm headroom for doors with an opening height up to 2150mm. Alternatively SeceuroGlide Compact can be fitted externally. We strongly recommend that a minimum 55mm of bottom slat should hang down into the guide rails when the door is fully raised. Below this is the "drive through height".

WARRANTY: All SeceuroGlide products are guaranteed against defect of material or workmanship, subject to correct installation and operation, for a period of 2 years from the date of purchase. Mahogany and Golden Oak Textured Woodgrain finishes carry a limited 10 year guarantee. The Somfy Motor carries a 5 year guarantee.

HAG design, manufacture and install a full range of property protection systems for domestic commercial and industrial applications.

Our dedicated Customer service teams ensure complete satisfaction by providing comprehensive support from ordering to owning HAG products.

After care benefits:

- Nation wide service
- 24 hour repair help line
- Service contracts
