the concept of mobile storage

"mobile systems can double the capacity for filing and storage or free valuable floor space"

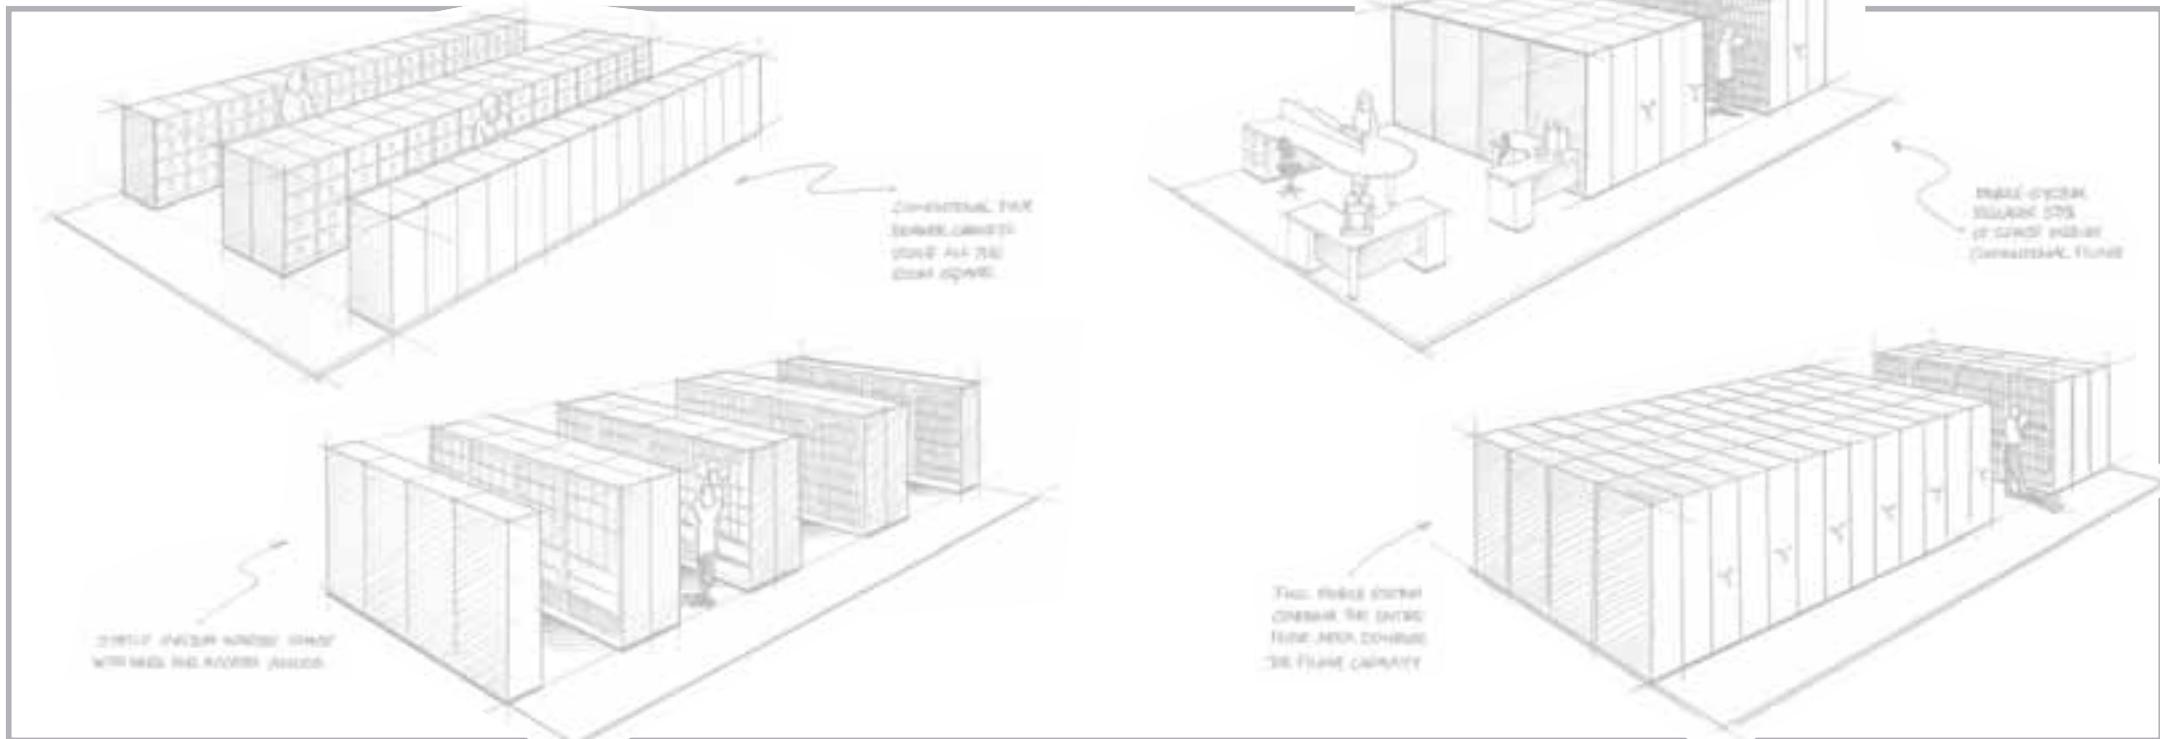

"A cost effective method of utilising your valuable floorspace"

"Mobile systems can easily be relocated and reconfigured"

Rackline's turnkey solutions take you from planning...

...to accurate 3D virtual reality rendering...

...to the reality of a fully installed and operating mobile system.

monotrak operates on a single guide track

Monotrak is a unique mobile system, operating on a single guide track laid directly onto the existing floor.

Monotrak will double your storage capacity, is simple to operate and gives the added flexibility of simple relocation without residual damage.

Due to the way the system spreads the load, Monotrak can operate on a raised access floor without the need for reinforcement. A slim carriage profile and outstanding design enables loads of up to 2,500kg and 5 metres long to be moved with ease.

The Monotrak Chassis

Turning the external drive wheel, situated on the end panel and linked vertically to the bottom sprocket via reduction gears, turns the torque tube. This revolves the drive wheels. Trailing wheels are deployed on the opposite side of the chassis.

All loads imposed on the bases are transmitted evenly to the floor through a series of specially designed polyurethane tyred wheels that run happily on any surface. This means that unlike

many mobile systems, Monotrak requires no false floor and does not create the trip hazard caused by surface mounted track.

Monotrak's low profile design often allows an additional level of filing to be accommodated, further increasing its capacity.

Loads of up to
2,500 kgs,
5 metres long can be
moved with ease

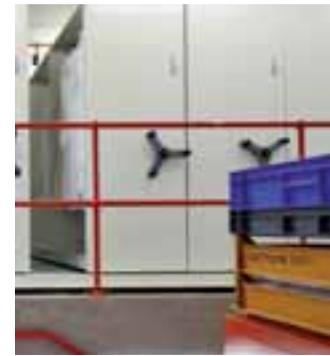

multitrak
operates on
multiple
torque tubes

Multitrak operates on the same principle as Monotrak, but employs multiple torque tubes and wheels to accommodate longer bases and greater loads.

Mobile carriages up to 12 metres long and loads of up to 15 tonnes per carriage can be moved with ease, and Multitrak's powerful guidance and drive system ensures carriages remain perfectly aligned on tracks.

Loads of up to
15 tonnes
and 12 metres long,

built
to your space
requirements

Multitrak
accommodates
long bases and
heavy loads

The Multitrak system can be either direct or chain drive and the tracks are laid to exacting tolerance with either an infill floor or prior to screeding. The infill floor will prevent trip hazards from exposed rails and the floor can be covered to match surrounding décor.

powertrak high technology with simple control

Powertrak has all the sophisticated programmable logic controls you would expect from the latest hi-tech system, but it combines this technology with the simplest operator controls imaginable. In normal operation, the operator simply presses "Green For Go" and all controls and operations are handled automatically by the logic systems.

There are numerous options that can be included in the system including:

- Timed access control for any hours you require
- Automatic lighting
- An option for auto close when fire alarm or security alarm is activated
- PIN access for authorized staff
- Integration with access control and security systems

maximise
your space
with electronic technology

Powertrak link to Network

An option with the powered system is to link to the network. A linked system will provide many benefits, especially for multi-installation in different locations.

Via a PC, control can be exercised over security and tracking requirements. One central PC can control any number of Powertrak installations situated in multiple locations.

all components exceed
the legal standards
and are designed
for exceptional
longevity

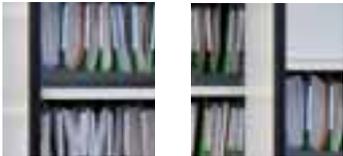

Controls

There is a choice of operational controls depending on requirements.

sidetrak combines static and mobile storage

Sidetrak is a self contained storage system designed to combine static and mobile storage. Its main benefit is to provide a high volume of storage in areas with limited space and where corridors and alcoves need to be utilised. Sidetrak is often used to partition office space by creating islands with back to back units.

The system features row of fixed cabinets fronted by one less in number, of sliding units. The rear rank is accessed by sliding the front cabinets. The Sidetrak system comes complete with anti-tilt device.

filestation low level mobile storage

Filestation is the first high density product specifically designed for the working office. By bringing active files back into the central office, productivity is increased dramatically. Filestation typically saves up to 33% of floorspace and cuts retrieval times by 40% over conventional storage methods.

Thrutrak gives access from either side of the Filestation, allowing the flexibility of a free standing Filestation or a traditional benching layout.

SteelDesk designed specifically to suite in with Filestation, is a recyclable desking system which allows you to create a total office environment that is completely sustainable.

Tower Pedestal complements both the SteelDesk and the core concept of Filestation, in providing a stylish design allied with practical functional storage. Its multiple levels, including one for personal belongings and the ability to create a private zone, make this an integral member of the Filestation family.

Accessories are available with Filestation as with any other Rackline product. These include lockers, pull out drawers, book supports, pull out reference shelves and the option to make your Filestation lockable.
