a wide range of accessories

SHELVES □ DRAWERS □ SUPPORTS □ DIVIDERS □ CRADLES

profile

a flexible high density filing facility

Profile shelving has been designed as a modular closed wall construction where the intermediate uprights support the shelves in the adjoining bays. This design ensures there are no sharp edges to the upright, no possibility of stock migrating from bay to bay or becoming trapped behind upright posts.

Each bay will carry a 750kg load and a standard shelf load of 90kgs.

The system can be fitted with either a back plate or back braces.

With adjustable shelves at 25mm pitch and a wide range of accessories, the system is totally flexible and can be converted to the widest applications. Each shelf can be easily moved by untrained staff.

Single panel upright for strength and ensuring maximum use of space.

Double panel upright for total protection to stock.

proform

cares for your product on the shelf

Proform shelving has been designed with a double panel upright to provide total protection to the contents of the shelf.

With no protrusions, edges or raised seams, even precious manuscripts and rare books are well cared for.

It also means that when shelves are pitched asymmetrically, the shelf clips will not protrude into the adjoining aperture.

Proform, like Profile is equally at home being specified in a static system or a mobile one. Proform also has the same high performance finish and load capacity as Profile.

prospan

designed to maximise capacity in archive and industrial applications

Prospan shelving is a system designed to extend beyond the sizes of Profile and Proform and yet retain the aesthetic looks that are sometimes lost with traditional long span systems.

The Prospan system can be specified in lengths between 1200mm and 1800mm wide and up to 4500mm in height with a capacity spread load per shelf of 125kgs.

Superbly designed with solid post sections Prospan is a solution led product manufactured from high quality components including solid post sections. These provide top performance allied to visual appealing end panels. Flexibility of build and maintenance is provided as the shelves are positioned through adjustable clips rather than bolts.

Solid posts allowing stability and optimum performance.
