

Protective & Marine Coatings

FIRETEX[®] FFC250 WATER BASED INTUMESCENT

FORMERLY KNOWN AS FFC250 FIRETEX BARRIER COATING

Revised 05/2016 Issue 6

PRODUCT INFORMATION

PRODUCT DESCRIPTION

A Waterbased, flexible, fire resistant coating

RECOMMENDED USE

A fire resistant coating for galvanized ductwork

RECOMMENDED APPLICATION METHODS

Airless Spray

Recommended Cleanser/Thinner: Water

ENDORSEMENTS

BS476 Part 6 – Fire Propagation

BS476 Part 7 – Surface Spread of Flame

BS6853 Annex B – Toxic Fume Test

BS6853 Annex D – Smoke Emissions – for details of substrate/scheme consult Sherwin-Williams.

PRODUCT CHARACTERISTICS

Flash Point: Above 55°C

% Solids by Volume: 55 ± 3% (ASTM-D2697-91)

Colour Availability: Red

VOC

50 gms/litre calculated from formulation to satisfy EC Solvent Emissions Directive

34 gms/kilo content by weight from formulation, to satisfy EC Solvent Emissions Directive

TYPICAL THICKNESS

Dry film thickness	Wet film thickness	Theoretical coverage
350 microns	635 microns	1.57 m ² /ltr*

* This figure makes no allowance for surface profile, uneven application, overspray or losses in containers and equipment. Film thickness will vary depending on actual use and specification.

PRACTICAL APPLICATION RATES - MICRONS PER COAT

	Airless Spray
Dry	350*
Wet	635

* Maximum sag tolerance typically 818µm wet (450µm dry) by airless spray.

AVERAGE DRYING TIMES

	At 15°C	At 23°C
To touch:	4 hours	2 hours
To recoat:	8 hours	6 hours
To handle:	24 hours	22 hours

These figures are given as a guide only. Factors such as air movement and humidity must also be considered. Film thickness will vary depending on actual use and specification.

RECOMMENDED TOPCOATS

Indefinitely overcoatable with itself
Consult Sherwin-Williams for advice regarding other suitable topcoats.

PACKAGE

Single component material.

Pack Size: 200 litre units.

Weight: 1.48 kg/litre

Shelf Life: 6 months from date of manufacture or 'Use By' date where specified. Protect from frost, maximum temperature 25°C.

Protective & Marine Coatings

FIRETEX[®] FFC250 WATER BASED INTUMESCENT

FORMERLY KNOWN AS FFC250 FIRETEX BARRIER COATING

Revised 05/2016 Issue 6

PRODUCT INFORMATION

SURFACE PREPARATION

Ensure surfaces to be coated are clean, dry and free from all surface contamination.

APPLICATION EQUIPMENT

Conventional Spray

Nozzle Size : 0.53-0.63mm (21-25 thou)
Fan Angle : 40°
Operating Pressure: 315kg/cm² (4500 psi)

The airless spray details given above are intended as a guide only. Details such as fluid hose length and diameter, paint temperature and job shape and size all have an effect on the spray tip and operating pressure chosen. However, the operating pressure should be the lowest possible consistent with satisfactory atomisation. As conditions will vary from job to job, it is the applicators' responsibility to ensure that the equipment in use has been set up to give the best results. If in doubt Sherwin-Williams should be consulted.

Recommended Equipment : Use a 45:1 or 60:1 Graco King or equivalent. Use 3/8" ID fluid lines where lengths in excess of 10 feet are required. In-line gun or pump filters should not normally be used.

APPLICATION CONDITIONS AND OVERCOATING

Substrate temperature shall be at least 3°C above the dew point and always above 0°C.

At application temperatures below 10°C, drying and curing times will be significantly extended, and spraying characteristics may be impaired.

At relative humidities in excess of 65%, drying will be significantly extended.

A minimum temperature of 5°C is required to ensure proper film formation.

Relative humidity should not exceed 80% to ensure proper film formation.

Extended overcoating times may be required at low temperatures and/or high film thicknesses, otherwise cracking may occur. If the maximum recommended thickness per coat is exceeded or high film thicknesses are overcoated prematurely, cracking may occur.

ADDITIONAL NOTES

In common with other water based coatings, the drying of this material is retarded by high humidity conditions. Lack of air movement also slows down the drying process, and under such conditions, it is advisable to introduce some method of circulating air over the coated surface in order to speed up the drying. A ventilated air speed of 2 metres per second is recommended.

FFC250 Firetex Barrier Coating may thicken on storage over time. If this occurs, it is possible to thin the product by incremental additions of 1% water (up to a maximum of 5%). Care must be taken as over-thinning with water may affect sag resistance.

Numerical values quoted for physical data may vary slightly from batch to batch.

HEALTH & SAFETY

Consult Product Health and Safety Data Sheet for information on safe storage, handling and application of this product.

WARRANTY

Any person or company using the product without first making further enquiries as to the suitability of the product for the intended purpose does so at their own risk, and Sherwin-Williams can accept no liability for the performance of the product, or for any loss or damage arising out of such use.

The information detailed in this Data Sheet is liable to modification from time to time in the light of experience and of normal product development, and before using, customers are advised to check with Sherwin-Williams, quoting the reference number, to ensure that they possess the latest issue.
