The Osma/Wavin Non Man-Entry Inspection Chamber Range

The Osma/Wavin range of Non Man-Entry Inspection Chambers are designed for use in gravity drainage installations and are offered for connections to pipe diameters: 110mm, 150/160mm, 225mm and 300mm.

The Osma/Wavin range of chambers offers a number of base and shaft configurations to gain access to underground drainage pipelines, giving Specifiers and Installers the freedom to choose the most suitable system for their needs. The alternatives available are:

Inspection Chambers – Shallow
For use at a maximum invert depth of 0.6 metres in Building Control applications and/or 0.9 metres in Sewers for Adoption 7 (SfA7) applications. (Multi-Base range only).

Inspection Chambers – Deep
For use at a maximum invert depth of 1.2 metres in Building Control applications and 3.0 metres in Sewers for Adoption 7 (SfA7) applications.

Material

a) Inspection Chambers
   Polypropylene is used in the manufacture of the majority of the Osma/Wavin Non Man-Entry Inspection Chamber range.

b) Sealing Rings
   Snap-Cap-Polypropylene and Sealing Ring – TPE.

Standards

British Standards Institution

The Osma/Wavin range of Non Man-Entry Inspection Chambers comply where applicable with the requirements of the following British Standards:

BS EN 124:1994 Gully tops and manhole tops for vehicular and pedestrian areas.

BS EN 13598 Parts 1 & 2 Plastics piping systems for non-pressure underground drainage and sewerage.

Acceptance

The Osma/Wavin range of Non Man-Entry Inspection Chambers are included in the following publication:-

General Information
Osma/Wavin Chambers

Descriptions

Descriptions and illustrations in this publication are for guidance only. No responsibility can be accepted for any errors, omissions or incorrect assumptions. Refer to the product itself if more detailed information is required. Due to the continuing programme of product improvement, Wavin reserves the right to amend any published information or to modify any product without prior notice.

Dimensions

Unless otherwise stated all dimensions are in millimetres (mm).

Symbols

a) British Standard Kitemark  
Identifies chambers which are manufactured under the B.S.I. Certification Scheme.

b) British Board of Agrément  
Identifies Non-Kitemarked fittings which are covered by a British Board of Agrément Certificate.

Colour

Most Inspection Chambers – Black
Ring Seals – Black

Supply

All Osma/Wavin Non Man-Entry Inspection Chambers are supplied through a nationwide network of merchant distributors. For further information contact Customer Services on 0844 856 5152.

Technical Advice

The Osma/Wavin Non Man-Entry Inspection Chamber Range is backed by Wavin’s comprehensive technical advice service. This is available to provide expert assistance at every stage of a project, from planning and product selection to installation and maintenance.

Contact Wavin Technical Design Department:

Tel: 0844 856 5165
Email: technical.design@wavin.co.uk

Literature

The following Wavin publications are also available from the Literature Department at Chippenham.

Product and Installation details for Osma Inspection Chambers – Shallow are shown in the orange section and Wavin Inspection Chambers – Deep are shown in the blue section of this booklet.
Product Details
Shallow IC

Introduction

Description

250mm diameter polypropylene inspection chamber for adoptable and non-adoptable applications. Compliant with Sewers for Adoption 7th edition [SfA7].

Single unit with integral shaft, for use with 110mm OsmaDrain system.

Shaft may be cut to length to achieve required invert depth.

Applications

- For above ground access and maintenance inspection of buried pipework up to 0.6 metres deep
- For loading applications up to 10kN (1.0 Tonne)

Key Dimensions

- External shaft diameter: 250mm
- Inlets/outlets: 110mm

Key Features & Benefits

- Fast, easy installation: no wet trades
- Lightweight: no lifting equipment required
- Shaft can be cut to required length
- No additional trench excavation required

Compliance

The Shallow Inspection Chamber complies with the following standards and regulations

- BS EN 13598-1: 2010
- SfA7 Typical Chamber Detail – Type 4; (to max. 0.6m depth only)
- Building Regulations – Part H1: Shallow only, to maximum depth 0.6m
Shallow Inspection Chamber

Maximum invert depth 0.6m, whether used in adoptable or non-adoptable applications.

D/S Equal Shallow Inspection Chamber
- 250mm dia. base with integral shaft, incorporating straight channel and three inlets, including 2 x 45° equal branch inlets
- For use with 110mm OsmaDrain
- Supplied with two profiled blank-off plugs for unused side entries

Material: Polypropylene

Product Details
Multi-Base IC

Introduction

Description

315mm diameter polypropylene inspection chamber for adoptable and non-adoptable applications. Compliant with Sewers for Adoption 7th edition [SfA7].

Choice of ten base configurations for use with 110mm OsmaDrain system.

Shaft may be assembled to required invert depth by using shaft sections 4D937.

Applications

- For above ground access and maintenance inspection of buried pipework
  - Down to 0.6m deep under Building Regulations – Part H1
  - Down to 0.9m deep under SfA7 Typical Chamber Detail – Type 4
- For loading applications up to 15kN (1.0 Tonne)

Key Dimensions

- Invert depth of base: 205mm
- External shaft diameter: 315mm
- Shaft section length: 150mm
- Inlets/outlets: 110mm

Key Features & Benefits

- Multiple options for maximum installation flexibility
- Fast, easy installation: no wet trades
- Lightweight: no lifting equipment required
- Push-fit shaft sections: one or more can be used to achieve required invert depth
- Final shaft section can be cut to required length
- No additional trench excavation required

Compliance

Multi-Base Inspection Chambers comply with the following standards and regulations

- BS EN 13598-1: 2010
- SfA7 Typical Chamber Detail – Type 4 (to max. 0.9m depth only)
- Building Regulations – Part H1: Shallow only, to maximum depth 0.6m
Multi-Base Inspection Chamber Bases

When used in non-adoptable applications, maximum invert depth 0.6m.
When used in adoptable applications, maximum invert depth 0.9m.

D/S Equal Shallow Inspection Chamber Base
- 315mm dia. base incorporating straight channel and single inlet
- For use with 110mm OsmaDrain

**Universal IC**

**Introduction**

**Description**

450mm diameter polypropylene inspection chamber for adoptable and non-adoptable applications. Compliant with Sewers for Adoption 7th edition [SfA7].

Choice of five base configurations for equal and unequal pipe connections.

Base configurations available for use with either 110/160mm OsmaDrain or 150mm UltraRib.

Shaft may be assembled to required invert depth by using shaft sections 4D975 (maximum 1.2m).

**Applications**

- For above ground access and maintenance inspection of buried pipework up to 1.2 metres deep
- For loading applications up to 15kN (1.5 tonnes)

**Key Dimensions**

- Height of bases:
  - 295mm [for 110mm system]
  - 270mm [for 150mm and 160mm systems]
- External shaft diameter: 450mm
- Shaft section length: 305mm
- Maximum installation depth: 1.2m

**Key Features & Benefits**

- Fast, easy installation: no wet trades
- Lightweight: no lifting equipment required
- Push-fit shaft sections: one or more can be used to achieve required invert depth
- Final shaft section can be cut to required length
- No additional trench excavation required

**Compliance**

Universal Inspection Chambers comply with the following standards and regulations

- BS EN 13598-1: 2010
- SfA7 Typical Chamber Detail – Type 4 (to max. 1.2m depth only)
- Building Regulations – Part H1: Shallow and/or Deep
Universal Inspection Chambers – 450mm Shaft

When used in adoptable/non-adoptable applications, maximum invert depth 1.2m.

D/S Equal Inspection Chamber Base

- 450mm dia. base incorporating straight channel and 5 inlets including 2 x 45° and 2 x 90° equal branch inlets
- For use with 110mm OsmaDrain
- Supplied with 3 blank-off plugs for unused side entries

Material: Polypropylene

Product Details
Non Man-Entry IC

Introduction

Description

500mm diameter polypropylene inspection chamber for adoptable and non-adoptable applications. Compliant with Sewers for Adoption 7th edition [SfA7].

Choice of three base configurations for equal and unequal pipe connections.

Base configurations available for use with either 110/160mm OsmaDrain or 150mm UltraRib.

Applications

○ For above ground access and maintenance inspection of buried pipework
○ For loading applications up to 15kN (1.5 tonnes)

Key Dimensions

○ External shaft diameter: 572mm
○ Maximum installation depth: 1.2m

Key Features & Benefits

○ Easy to install
○ Lightweight: no lifting equipment required
○ Shaft can be easily cut to required length
○ No additional trench excavation required

Compliance

The Non Man-Entry Inspection Chamber complies with the following standards and regulations

- BS 7158: 2001
- SfA7 Typical Chamber Detail – Type 4: (to max. 1.2m depth only)
- Building Regulations – Part H1: Shallow and/or Deep

Non Man-Entry Inspection Chamber assembly
Non Man-Entry Inspection Chambers – 500mm Shaft

Inspection Chamber 500mm dia. is Kitemarked to BS 7158, when used in adoptable areas maximum invert depth is 1.2m, when used in non-adoptable areas, maximum invert depth available under BS 7158 is 3m.

D/S Equal Inspection Chamber Base

- 110mm straight channel with two 110mm x 45° and two 110mm x 90° left/right hand branch entries
- For use with 110mm OsmaDrain components
- Supplied complete with a base to shaft sealing ring and 3 blank-off plugs for use in unused side entries

Material: Polypropylene

<table>
<thead>

Installation
Shallow/Multi-Base IC

Typical Installation of 250/315mm dia. Inspection Chambers

The following is a typical summary of the installation procedures required to install the Osma 250/315mm dia Inspection Chambers.

The Shallow and Multi-Base Inspection Chamber may be installed in the same minimum trench width as required for standard 110mm drainage pipework. NO extension of trench width is required.

All elements are lightweight: may be handled/installed by a single person.

Preparation

1. Prepare and compact 100mm regulating bed of ‘as dug’ or granular material in trench bottom

Positioning/connection

1. Position Base on regulating bed. Check outlet is facing in the correct direction
2. Ensure all inlets/outlet are free from dirt or grit
3. In the case of the Shallow Inspection Chamber, remove profile plug(s) for the side outlets required
4. Use standard jointing sequence to connect 110mm OsmaDrain pipes to inlets/outlet

Backfill trench

1. Before starting backfill, cover top of shaft to prevent ingress of dirt or grit
2. Select suitable sidefill – use ‘as dug’. If not appropriate, use suitable granular material, similar to bedding material
3. Avoid knocking shaft during backfilling – and keep free of debris
4. Backfill to formation level. Then trim shaft to required height using fine-toothed saw

NOTE: If finished ground level is not yet known, leave shaft proud of surface and keep open end covered until final completion.

Figure 1: Typical installation detail: Shallow Inspection Chamber
Cover and Frame:
Installation onto/into 250/315mm dia. Inspection Chambers

For green areas and pedestrian areas NOT* subject to vehicle loading (See Figures 3 & 5).

EXAMPLE: 250mm Inspection Chamber in domestic gardens

- Trim shaft section at last stage of construction. Ensure unit is at correct height. Use cutting guides shown on chamber unit
- Prepare polypropylene Cover and Frame [4D325 or 4D961] for installation onto and/or into the shaft section:

[4D325]

- Clean and lubricate outside of shaft top
- Ensure sealing ring inside the frame section is seated correctly and free from dirt and grit
- Position the cover and frame spigot over the shaft and push-fit home
- Fix frame to shaft using self-tapping screws (not provided)

[4D961]

- Clean and lubricate inside of shaft top
- Ensure sealing ring located on the outside of the frame section is seated correctly and free from dirt and grit
- Position the cover and frame spigot into the shaft and push-fit home
- Fix frame to shaft using self-tapping screws (not provided)

EXAMPLE: 315mm Inspection Chamber in domestic gardens

- Trim shaft section at last stage of construction. Ensure unit is at correct height
- Lay 150mm thick slab of pre-cast or in situ concrete around top of shaft section
- Prepare polypropylene Cover and Frame [4D325 or 4D961] for installation onto and/or into the shaft section, as previously described

EXAMPLE: 250mm Inspection Chamber in domestic paths/patios

○ Leave top 150mm of shaft clear of backfill
○ Lay 150mm thick slab of pre-cast or in situ concrete around top of shaft section
○ Lubricate inside of top shaft section
○ Prepare polypropylene Cover and Frame [4D969] for installation into shaft: ensure pre-fitted ring seal is clean and not twisted
○ Position the cover and frame socket into the shaft section and push home
○ Fix frame to shaft using self-tapping screws (not provided)

EXAMPLE: 315mm Inspection Chamber in domestic paths/patios

○ Leave top 150mm of shaft clear of backfill
○ Lay 150mm thick slab of pre-cast or in situ concrete around top of shaft chamber
○ Lubricate inside of top shaft section
○ Prepare polypropylene Cover and Frame [4D969] for installation into shaft: ensure pre-fitted ring seal is clean and not twisted
○ Position the cover and frame socket into the shaft section and push home
○ Fix frame to shaft using self-tapping screws (not provided)

*For A15 applications subject to occasional loading up to 15kN (1.5 tonnes) (See Figures 4 & 6).
## Installation

**Shallow/Multi-Base IC**

Figure 3: Installation detail – green areas (non-loaded)

4D325 (Round) or 4D961 (Square) Cover & Frame

NHBC requirement secure frame to shaft using screws

Compacted backfill ‘as dug’ if suitable, or granular material

4D960 Shallow Inspection Chamber with 250mm dia. Shaft

Figure 4: Installation detail A15 – areas subject to occasional vehicle loading up to 15kN (1.5 tonnes)

4D961 (Square) Cover & Frame

NHBC requirement secure frame to shaft using screws

150mm deep concrete collar

Compacted backfill ‘as dug’ if suitable, or granular material

4D960 Shallow Inspection Chamber with 250mm dia. Shaft

4D969 Cover and Frame

Compacted backfill ‘as dug’ if suitable, or granular material

4D937 Inspection Chamber Shaft

Figure 6: Installation detail A15 – areas subject to occasional vehicle loading up to 15kN (1.5 tonnes)

4D969 Cover and Frame

150mm deep concrete collar

4D937 Inspection Chamber Shaft

Compacted backfill ‘as dug’ if suitable, or granular material
**Installation**

**Universal/Non Man-Entry IC**

**Typical Installation of 450/500mm dia. Inspection Chamber**

The following is a typical summary of the installation procedures required to install Osma 450/500mm dia. Inspection Chambers.

All elements are lightweight: may be handled/installed by a single person.

**Excavation**

- Take precautions against trench collapse: support trench sides deeper than 1.2m

**Preparation**

- Prepare and compact 100mm regulating bed of ‘as dug’ or granular material in trench bottom

**Positioning**

- Use standard jointing sequence to connect 110/160mm OsmaDrain or 150mm UltraRib pipes to inlets/outlets
- Push blank-off plugs externally into any unused outlet(s)

**Shaft assembly – 450mm Inspection Chamber**

- Clean inside of Base socket and lubricate this entire area
- Position first shaft section into Base socket. Vertically push home manually
- Push-fit further shaft sections as required for invert depth. Ensure inside of each shaft section is pre-lubricated
- Cut final shaft section to approximate required height, using a fine-toothed saw. (Use external rings as cutting guides)

**Shaft assembly – 500mm Inspection Chamber**

- Cut corrugated shaft to approx. Invert depth of Chamber.
- Locate sealing ring between 2nd and 3rd ribs from shaft bottom. Ensure ring is seated correctly/not twisted
- Clean inside of Base socket and lubricate this entire area
- Position shaft at 45° angle into Base socket. Vertically push home manually or, if required, with mechanical assistance (if so, protect top of shaft)

**Backfill trench**

- Before starting backfill, cover top of shaft to prevent ingress of dirt or grit
- Select suitable sidefill – use ‘as dug’. If not appropriate, use suitable granular material, similar to bedding material
- Avoid knocking shaft during backfilling – and keep free of debris
- Backfill to formation level. Then trim shaft to required height using fine-toothed saw

**NOTE:** If finished ground level is not yet known, leave shaft proud of surface and keep open end covered until final completion.

**Backfill trench**

- Before starting backfill, cover top of shaft to prevent ingress of dirt or grit
- Select suitable sidefill – use ‘as dug’. If not appropriate, use suitable granular material, similar to bedding material
- Avoid knocking shaft during backfilling – and keep free of debris
- Backfill to formation level. Then trim shaft to required height using fine-toothed saw

**NOTE:** If finished ground level is not yet known, leave shaft proud of surface and keep open end covered until final completion.

Installation

Universal/Non Man-Entry IC

Cover and Frame: Installation onto/into 450/500mm dia. Inspection Chambers

For green areas and pedestrian areas NOT* subject to vehicle loading (See Figure 8).

EXAMPLE: 450mm Inspection Chamber in domestic gardens

1. Trim shaft section at last stage of construction. Ensure unit is at correct height
2. Prepare selected Cover and Frame [4D920, 4D924 or 4D927] for installation into shaft
3. Position the cover and frame spigot into the shaft section
4. Fix frame to shaft using self-tapping screws

EXAMPLE: 500mm Inspection Chamber in domestic gardens

1. Trim shaft section at last stage of construction
2. Locate sealing ring (6D917) between 2nd and 3rd ribs from shaft top. Ensure ring is sealed correctly, not twisted
3. Prepare NIC Telescopic Adaptor (6D940), position over top of shaft and push fully home
4. Prepare selected Cover and Frame [4D920]
5. Position the cover and frame spigot into the Telescopic Adaptor
6. Fix frame to adaptor using the eyebelts provided

*For A15 applications subject to occasional loading up to 15kN (1.5 tonnes) (See Figure 9).

EXAMPLE: 450/500mm Inspection Chambers domestic paths/patios

1. Leave top 150mm of shaft clear of backfill
2. Lay 150mm thick slab of pre-cast or in situ concrete around top of shaft chamber
3. Prepare selected Cover and Frame [4D920, 4D924 or 4D927] for installation into shaft
4. Position the cover and frame spigot into the shaft section
5. Fix frame to shaft using self-tapping screws

For B125 applications subject to medium duty loading up to 12.5kN (12.5 tonnes) (See Figure 10).

EXAMPLE: 450/500mm Inspection Chambers in paved areas with limited traffic load

1. Trim shaft section at last stage of construction. Ensure unit is at correct height
2. Protect shaft from traffic loading by shuttering its external ribs
3. Lay 150mm thick slab of pre-cast or in situ concrete around top of shaft chamber with minimum opening 500mm x 500mm – or 500mm diameter – to ensure that any loads are distributed away from the shaft
4. On top of slab, construct Class B engineering brickwork OR concrete blocks OR pre-cast concrete seating rings up to required height
5. According to required loading application, position Ductile Iron B125 Cover and Frame or D400 Cover and Frame on top of slab

Figure 8: Installation detail – green areas (non-loaded)

Figure 9: Installation detail A15 – areas subject to occasional vehicle loading up to 15kN (1.5 tonnes)
Figure 10: Typical installation detail: 500mm dia Inspection Chamber, Type 4

- Cover & Frame
- Class B125 loading
- Driveway
- Class B engineering bricks set in class 1 mortar
- 150mm deep concrete collar
- Shuttering to external cap
- Restrictor cap 500mm dia to 350mm dia
- 500mm dia Shaft
- Compacted backfill – ‘as-dug’ or granular bedding material
- 100/110mm or 150/160 dia Pipe
- Granular bedding material
Product Details
Range 200 IC

Introduction

Description

200mm diameter polypropylene inspection chamber for adoptable and non-adoptable applications. Compliant with Sewers for Adoption 7th edition [SfA7].

For use directly with either 110/160mm plastic pipework or 150mm UltraRib system via the appropriate adaptor (6UR141).

200mm diameter shaft may be cut to length to achieve required invert down to a maximum of 2 metres.

Applications

- For above ground access and maintenance inspection of buried pipework down to 2 metres deep
- For loading applications:
  - A15 (1.5 tonnes)
  - B125 (12.5 tonnes) *
  - D400 (40 tonnes) *
* With cover & frame supported by concrete plinth (supplied by others)

Key Dimensions

- Invert depth of base:
  - 430mm [for 110mm system]
  - 450mm [for 160mm system]
- External shaft diameter: 200mm
- Shaft length: 2m
- Maximum installation depth: 2m

Key Features & Benefits

- Fast, easy installation: no wet trades
- Lightweight: no lifting equipment required
- Reinforcing ribs on underside to withstand groundwater pressure
- Shaft can be cut to required length
- No additional trench excavation required

Compliance

Range 200 chambers comply with the following standards and regulations

- BS EN 13598-1: 2010
- SIA7 Typical Chamber Detail – Type 4: (Non-entry. Maximum depth from cover level to soffit of pipe: 2m)
- Building Regulations – Part H1: Shallow only to maximum depth 0.6m
Base
When used in adoptable applications, maximum invert depth 2m.

D/S Equal Inspection Chamber Base
• 200mm dia. base incorporating straight channel and single inlet
• For use with 110/160mm plastic pipework systems
• Also for use with 150mm UltraRib, using Adaptor 6UR141

**Product Details**

**Range 315 IC**

**Introduction**

**Description**

315mm diameter polypropylene inspection chambers for adoptable and non-adoptable applications. Compliant with Sewers for Adoption 7th edition [SfA7].

Choice of eight base configurations for equal pipe connections.

For use directly with either 110/160mm plastic pipework or 150mm UltraRib system via the appropriate adaptor (6UR141).

315mm diameter shaft may be cut to length to achieve required invert down to a maximum of 2 metres.

**Applications**

- For above ground access and maintenance inspection of buried pipework down to 2 metres deep
- For loading applications:
  - A15 (1.5 tonnes)
  - B125 (12.5 tonnes) *
  - D400 (40 tonnes) *
  - With cover & frame supported by concrete plinth

**Key Dimensions**

- Invert depth of base:
  - 238mm [for 110mm system]
  - 290mm [for 160mm system]
- External shaft diameter: 315mm
- Shaft length: 2m
- Maximum installation depth: 2m

**Key Features & Benefits**

- Fast, easy installation: no wet trades
- Lightweight: no lifting equipment required
- Reinforcing ribs on underside to withstand groundwater pressure
- Shaft can be cut to required length
- No additional trench excavation required

**Compliance**

Range 315 chambers comply with the following standards and regulations

- BS EN 13598-2: 2009
- SfA7 Typical Chamber Detail – Type 4: (Non-entry. Maximum depth from cover level to soffit of pipe: 2m)
- Building Regulations – Part H1: Shallow only to maximum depth 0.6m

Product Details
Range 450 IC

Introduction

Description

450mm diameter polypropylene inspection chamber for adoptable and non-adoptable applications. Compliant with Sewers for Adoption 7th edition [SfA7].

Choice of eight bases for equal and unequal pipe connections.

Dedicated bases for use directly with either 110/160mm plastic pipework or 150mm UltraRib system via the appropriate adaptor (6UR141).

450mm diameter shaft may be cut to length to achieve required invert up to maximum 3 metres.

Applications

- For above ground access and maintenance inspection of buried pipework up to 3 metres deep
- For loading applications:
  - A15 (1.5 tonnes)
  - B125 (12.5 tonnes) *
  - D400 (40 tonnes) *
- * With cover & frame supported by concrete plinth

NOTE: Concrete plinth not required for non-loaded applications such as domestic gardens

Key Dimensions

- Invert depth of bases: 440-462mm (at centre point of base)
- External shaft diameter: 515mm
- Shaft length: 3m
- Maximum installation depth: 3m

Key Features & Benefits

- Full range of dedicated bases, ensure that smooth flow can be achieved
- Quick & easy to install, with a sculpturedneck on the base, which allows the shaft to be fitted with little effort
- Lightweight polypropylene chamber bases, no lifting equipment required
- 3m shaft can be cut to required length

Compliance

Range 450 chambers comply with the following standards and regulations

- BS EN 13598-2: 2009
- SfA7 Typical Chamber Detail – Type 3: (Non-entry. Maximum depth from cover level to soffit of pipe: 3m)
- Building Regulations – Part H1: Shallow and/or Deep

Range 450 Inspection Chamber assembly
Bases – For use with 110mm plastic pipework

All Range 450 bases are supplied with a base-to-shaft sealing ring. When used in adoptable applications, maximum invert depth 3m.

**D/S Equal Inspection Chamber Base**
- 450mm dia. base straight channel and single inlet
- Material: Polypropylene

Product Details
Range 600 IC

Introduction

Description

600mm diameter polypropylene inspection chamber for adoptable and non-adoptable applications. Compliant with Sewers for Adoption 7th edition [SfA7].

Choice of twelve bases for equal pipe connections.

For use directly with 150mm, 225mm and 300mm UltraRib system.

600mm diameter shaft may be cut to length to achieve required invert down to a maximum of 3 metres.

Applications

- For above ground access and maintenance inspection of buried pipework down to 3 metres deep
- For loading applications:
  - B125 (12.5 tonnes) *
  - D400 (40 tonnes) *
* With cover & frame supported by concrete plinth

Key Dimensions

- Invert depth of base:
  - 646mm [for 150mm system]
  - 705mm [for 225mm and 300mm systems]
- External shaft diameter: 683mm
- Shaft length: 3m
- Maximum installation depth: 3m

Key Features & Benefits

- Fast, easy installation: no wet trades
- Lightweight: no lifting equipment required
- Reinforced base plate to withstand groundwater pressure
- Shaft can be cut to required length
- All inlets and outlet sockets allow ≤7.5˚ movement in all directions

Compliance

Range 600 chambers comply with the following standards and regulations

- BS EN 13598-2: 2009 ↩
- SfA7 Typical Chamber Detail – Type 3: (Non-entry. Maximum depth from cover level to soffit of pipe: 3m)
- Building Regulations – Part H1: Shallow and/or Deep

Range 200 Chamber and Shaft

NOTE: The following is a summary of installation procedures following selection of a suitable Range 200 Base.

The Range 200 inspection chamber may be installed in the same minimum trench width as required for standard 110mm or 160mm drainage pipework. NO extension of trench width is required.

All elements are lightweight: may be handled/installed by a single person.

Excavation

- Take precautions against trench collapse: support trench sides deeper than 1.2m

Preparation

- Prepare and compact 100mm regulating bed of granular material in trench bottom

Positioning/connection

- Position Base on regulating bed. Check outlet is facing in the correct direction

NOTE: On 24NE300/26NE300 Straight Bases, a flow indication arrow is inscribed

- Ensure all inlets/outlet are free from dirt or grit

- If connecting to 150mm UltraRib, insert the appropriate adaptors into the required inlet/outlet as follows:
  - 150mm UltraRib use Adaptor 6UR141
  - Bends up to 45° may be used on inlet and outlet

Backfill

- Using same material as bedding, backfill around Base in 150mm layers up to underside of shaft socket. Ensure inside of Base is free of debris

NOTE: On finished ground level is not yet known, leave shaft proud of surface and keep open end covered until final completion.

Figure 11: Typical installation detail: Range 200 Inspection Chamber Type 4
A15 Cover and Frame

A15 polypropylene cover and frames

20NE015 uses a dual fixing system for additional safety. The cover is pre-fixed to the frame using screws.

RECOMMENDATION: use self-tapping screws [not supplied] to secure the frame to the shaft.

For installation in areas not subject to loading, such as domestic gardens, no concrete plinth support is required (See Figure 12).

For A15 applications subject to occasional/temporary vehicle loading up to 15kN (1.5 tonnes) such as domestic driveways, the frame should be supported by a concrete plinth (See Figure 13).

Installation procedures:

For green areas and pedestrian areas NOT* subject to vehicle loading (See Figure 12)

EXAMPLE: domestic gardens

- Trim shaft section at last stage of construction. Ensure unit is at correct height

*For A15 applications subject to occasional vehicle loading up to 15kN (1.5 tonnes) (See Figure 13)

EXAMPLE: domestic driveways

- Leave top 150mm of shaft clear of backfill
- Lay 150mm thick slab of pre-cast or in situ concrete around top of shaft chamber

For both non-load and occasional loading applications, as above

- Prepare polypropylene Cover and Frame [20NE015] for installation onto shaft
- Position the cover and frame spigot into the shaft section
- Fix frame to shaft using self-tapping screws
**B125 & D400 Cover and Frame**

**Ductile iron cover and frames**

Ductile iron options are recommended for heavier loaded applications:

Class B125 – with medium duty loading capacity of 125kN (12.5 tonnes) where the frame is supported by a concrete plinth. Suitable for applications such as car parks and service roads.

Class D400 classification – with loading capability of up to 400kN (40 tonnes) where supported by a concrete plinth. Suitable for carriageways and roads subject to motor vehicle trafficking.

**Installation procedures:**

For B125 applications (See Figure 14)

**EXAMPLE:** car parks and service roads

- Trim shaft section at last stage of construction. Ensure unit is at correct height
- Protect shaft from traffic loading by shuttering the outside of the shaft (See Figure 14)
- Lay 150mm thick slab of pre-cast or in situ concrete around top of shaft chamber with minimum opening 450mm x 450mm – or 450mm diameter – to ensure that any loads are distributed away from the shaft
- Position Ductile Iron B125 Cover and Frame on top of slab (See Figure 14)

** Trafficked application (e.g. roadway)**

- Follow Highway Specification for installation of a D400 Cover and Frame

---

**Figure 14: Installation detail for B125 loading: paved areas with limited traffic load**

- Cover & Frame Class B125 loading
- Driveway
- 150mm deep concrete collar
- Shuttering to external shaft
- 200mm dia Shaft
- Compacted backfill – 'as-dug' or granular bedding material
# Installation

## Range 315 IC

### Range 315 Chamber and Shaft

**NOTE:** The following is a summary of installation procedures following selection of a suitable Base for the required number of inlets.

The Range 315 inspection chamber may be installed in the same minimum trench width as required for standard 110mm or 160mm drainage pipework. NO extension of trench width is required.

All elements are lightweight: may be handled/installed by a single person.

### Excavation

1. Take precautions against trench collapse: support trench sides deeper than 1.2m

### Preparation

1. Prepare and compact 100mm regulating bed of granular material in trench bottom

### Positioning/connection

1. Position Base on regulating bed. Check outlet is facing in the correct direction

**NOTE:** On 34NE300/36NE300 Straight Bases, a flow indication arrow is inscribed

2. If connecting to 150mm UltraRib, insert the appropriate adaptors into the required inlet/outlet as follows:
   - 150mm UltraRib use Adaptor 6UR141
3. Use standard jointing sequence to connect 100/110mm or 150/160mm pipes to inlets/outlet. Push Blank-off Plugs into any unused inlets

**NOTE:** The main through channel MUST be used. Bends up to 45° may be used on any inlet or outlet.

### Backfill

1. Using same material as bedding, backfill around Base in 150mm layers up to underside of shaft socket. Ensure inside of Base is free of debris.

### Backfill trench

1. Before starting backfill, cover top of shaft with cap provided

**NOTE:** If finished ground level is not yet known, leave shaft proud of surface and keep open end covered until final completion.

### Preparing shaft

1. Cut corrugated shaft to approx. Invert depth of Chamber. 
   RECOMMENDATION: leave extra 300mm depth to allow for possible final site changes
2. Locate sealing ring between 2nd and 3rd ribs from shaft bottom. Ensure ring is seated correctly/not twisted
3. Clean inside of Base socket and lubricate this entire area.
4. Position shaft at 45° angle into Base socket. Vertically push home manually or, if required, with mechanical assistance (if so, protect top of shaft)

### Backfill trench

Before starting backfill, cover top of shaft with cap provided

Figure 15: Typical installation detail: Range 315 Inspection Chamber. Type 4

---

[Diagram showing installation details]
**A15 Cover and Frame**

**A15 polypropylene cover and frames**

30NE015 uses a dual fixing system for additional safety. The cover is pre-fixed to the frame using screws.

**RECOMMENDATION:** use self-tapping screws [not supplied] to secure the frame to the shaft.

For installation in areas not subject to loading, such as domestic gardens, no concrete plinth support is required. (See Figure 16).

For A15 applications subject to occasional/temporary vehicle loading up to 15kN (1.5 tonnes) such as domestic driveways, the frame should be supported by a concrete plinth. (See Figure 17).

**Installation procedures:**

For green areas and pedestrian areas **NOT** subject to vehicle loading (See Figure 16)

**EXAMPLE:** domestic gardens

- Trim shaft section at last stage of construction. Ensure unit is at correct height

*For A15 applications subject to occasional vehicle loading up to 15kN (1.5 tonnes) (See Figure 17)*

**EXAMPLE:** domestic driveways

- Leave top 150mm of shaft clear of backfill
- Lay 150mm thick slab of pre-cast or in situ concrete around top of shaft chamber

**For all A15 applications**

- Clean outside of shaft section between first and second rib
- Locate sealing ring ensuring it is seated correctly/not twisted
- Prepare polypropylene A15 Cover and Frame [30NE015] for installation onto shaft:
  - clean inside of frame socket area
  - apply lubricant to entire surface area
- Position the cover and frame socket over the shaft section and push home
- Screw frame to shaft using self-tapping screws [not provided]
Installation
Range 315 IC

B125 & D400 Cover and Frame

Ductile iron cover and frames

Ductile iron options are recommended for heavier loaded applications:

Class B125 – with medium duty loading capacity of 125kN (12.5 tonnes) where the frame is supported by a concrete plinth. Suitable for applications such as car parks and service roads.

Class D400 classification – with loading capability of up to 400kN (40 tonnes) where supported by a concrete plinth. Suitable for carriageways and roads subject to motor vehicle trafficking.

Installation procedures:

For B125 applications (See Figure 18)

EXAMPLE: car parks and service roads

1. Trim shaft section at last stage of construction. Ensure unit is at correct height
2. Protect shaft from traffic loading by shuttering its external ribs (See Figure 18)
3. Lay 150mm thick slab of pre-cast or in situ concrete around top of shaft chamber with minimum opening 450mm x 450mm – or 450mm diameter – to ensure that any loads are distributed away from the shaft
4. Position Ductile Iron B125 Cover and Frame on top of slab. (See Figure 18)

Trafficked application (e.g. roadway)

5. Follow Highway Specification for installation of a D400 Cover and Frame
Installation
Range 450 IC

Range 450 Chamber and Shaft

NOTE: The following is a summary of installation procedures following selection of a suitable Range 450 Base for the required number of inlets.

Excavation

⊙ Take precautions against trench collapse: support trench sides deeper than 1.2m

Preparation

⊙ Prepare and compact 100mm regulating bed of granular material in trench bottom

Positioning/connection

⊙ Position Base on regulating bed. Check outlet is facing in the correct direction: i.e. with side inlets swept to follow water flow
⊙ If connecting to 150mm UltraRib, insert the appropriate adaptors into the required inlet/outlet as follows:
  — 150mm UltraRib use Adaptor 6UR141
⊙ Use standard jointing sequence to connect 100/110mm or 150/160mm pipes to inlets/outlet. Push Blank-off Plugs into any unused inlets

Preparing shaft

⊙ Cut corrugated shaft to approx. Invert depth of Chamber. RECOMMENDATION: leave extra 300mm depth to allow for possible final site changes
⊙ Locate sealing ring between 2nd and 3rd ribs from shaft bottom. Ensure ring is seated correctly/not twisted
⊙ Clean inside of Base socket and lubricate this entire area
⊙ Position shaft at 45° angle into Base socket. Vertically push home manually or, if required, with mechanical assistance (if so, protect top of shaft)

Backfill trench

⊙ Before starting backfill, cover top of shaft to prevent ingress of dirt or grit

Trim shaft/fit restriction access cap

⊙ Trim shaft to required height using finetoothed saw

NOTE: If finished ground level is not yet known, leave shaft proud of surface and keep open end covered until final completion.
⊙ When shaft trimmed to final height, locate sealing ring between 2nd and 3rd ribs from shaft top. Ensure ring is seated correctly/not twisted
⊙ Lubricate inside of the 450 to 350mm restrictor cap, position over top of shaft, and push fully home

Backfill

⊙ Using same material as bedding, backfill around Base in 150mm layers up to underside of shaft socket. Ensure inside of Base is free of debris

Figure 19: Typical installation detail: Range 450 Inspection Chamber. Type 4

Cover & Frame

Driveway

Class B125 loading

Class B engineering bricks set in class 1 mortar

150mm deep concrete collar

Shuttering to external cap

Restrictor cap 450mm dia to 350mm dia

450mm dia Shaft

Compacted backfill – "as-dug" or granular bedding material

100/110mm or 150/160mm Pipe

Granular bedding material
Installation
Range 450 IC

Installation procedures:

For A15 applications in domestic garden areas and/or subject to occasional vehicle loading up to 15kN (1.5 tonnes) (See Figure 20)

EXAMPLE: domestic driveways

1. Leave top 150mm of shaft clear of backfill
2. Lay 150mm thick slab of pre-cast or in situ concrete around top of shaft chamber
3. Prepare A15 Cover and Frame for installation in accordance with manufacturer's instructions
4. Position the cover and frame socket on top of slab and fix in accordance with manufacturer's instructions

B125 & D400 Cover and Frame

Installation procedures:

For B125 – Paved areas with limited traffic load

1. Trim shaft section at last stage of construction. Ensure unit is at correct height
2. Protect shaft from traffic loading by shuttering its external ribs (See Figure 21)
3. Lay 150mm thick slab of pre-cast or in situ concrete around top of shaft chamber with minimum opening 750mm x 750mm – or 750mm diameter – to ensure that any loads are distributed away from the shaft
4. Position Ductile Iron B125 Cover and Frame on top of slab. (See Figure 21)

Trafficked application (e.g. roadway)

1. Follow Highway Specification for installation of a D400 Cover and Frame

Figure 20: Installation detail A15 – domestic gardens and/or areas subject to occasional vehicle loading up to 15kN (1.5 tonnes)

Figure 21: Installation detail for B125 loading: paved areas with limited traffic load
Installation
Range 600 IC

Range 600 Chamber and Shaft

NOTE: The following is a summary of installation procedures following selection of a suitable Range 600 Base for the required number of inlets.

Excavation
- Take precautions against trench collapse: support trench sides deeper than 1.2m

Preparation
- Prepare and compact 100mm regulating bed of granular material in trench bottom

Positioning/connection
- Position Base on regulating bed. Check outlet is facing in the correct direction: i.e. with side inlets swept to follow water flow
- Ensure all inlets/outlet are free from dirt or grit
- Use standard jointing sequence to connect 150mm, 225mm or 300mm UltraRib pipes to inlets/outlet

For connection of TwinWall pipes in these sizes, use Adaptors 6TW145, 9TW145 or 12TW145.

NOTE: The main through channel MUST be used. Bends up to 45° may be used on any inlet or outlet.

Backfill
- Using same material as bedding, backfill around Base in 150mm layers up to underside of shaft socket.
  Ensure inside of Base is free of debris

NOTE: The main through channel MUST be used. Bends up to 45° may be used on any inlet or outlet.

Preparation
- Prepare and compact 100mm regulating bed of granular material in trench bottom

Positioning/connection
- Position Base on regulating bed. Check outlet is facing in the correct direction: i.e. with side inlets swept to follow water flow
- Ensure all inlets/outlet are free from dirt or grit
- Use standard jointing sequence to connect 150mm, 225mm or 300mm UltraRib pipes to inlets/outlet

For connection of TwinWall pipes in these sizes, use Adaptors 6TW145, 9TW145 or 12TW145.

NOTE: The main through channel MUST be used. Bends up to 45° may be used on any inlet or outlet.

Backfill
- Using same material as bedding, backfill around Base in 150mm layers up to underside of shaft socket.
  Ensure inside of Base is free of debris
Installation
Range 600 IC

Installation procedures:
For A15 applications in domestic garden areas and/or subject to occasional vehicle loading up to 15kN (1.5 tonnes) (See Figure 23)

EXAMPLE: domestic driveways

1. Leave top 150mm of shaft clear of backfill
2. Lay 150mm thick slab of pre-cast or in situ concrete around top of shaft chamber
3. Prepare A15 Cover and Frame for installation in accordance with manufacturer’s instructions
4. Position the cover and frame socket on top of slab and fix in accordance with manufacturer’s instructions

B125 & D400 Cover and Frame

Installation procedures:
For B125 – Paved areas with limited traffic load

1. Trim shaft section at last stage of construction. Ensure unit is at correct height
2. Protect shaft from traffic loading by shuttering its external ribs (See Figure 24)
3. Lay 150mm thick slab of pre-cast or in situ concrete around top of shaft chamber with minimum opening 750mm x 750mm – or 750mm diameter – to ensure that any loads are distributed away from the shaft
4. Position Ductile Iron B125 Cover and Frame on top of slab. (See Figure 24)

Trafficked application (e.g. roadway)

1. Follow Highway Specification for installation of a D400 Cover and Frame
Installation

Typical Backdrop Connection

Backdrop Connections for Ranges 315, 450 and 600

Installation of backdrop connections

A chamber which has substantially different invert levels will require backdrop connection of one or more drains. This operation can be done externally on site (See Figure 25).

Use a combination of Backdrop Kit [NE950 or NE960], with associated 100/110mm or 150/160mm fittings, for in situ connection to a shaft, as follows:

1. Drill required opening into corrugated shaft section at appropriate place
2. Clean and remove any swarf from the opening
3. Install the special 110mm or 160mm seal into the opening
4. Fully lubricate around the entire internal surface of the seal
5. Insert specially designed “in-situ” socket connector into the seal opening
6. Lubricate the outside surface of the spigot pipe to be connected and insert into the socket connector
7. Make remaining connections in the same way as for standard jointing of 110mm or 160mm pipes and or fittings

Figure 25: Typical installation detail – typical backdrop situation

- Cover & Frame
  - Class B125 loading
- Driveway
- Class B engineering bricks set in class 1 mortar
- 150mm deep concrete collar
- Shuttering to external cap
- Restrictor cap 450mm dia to 350mm dia
- 450mm dia Shaft
- Compacted backfill – “as-dug” or granular bedding material
- 100/110mm or 150/160mm dia Pipe
- Granular bedding material
Testing and Maintenance
Osma/Wavin Chambers

Testing

All testing of these non-man entry chambers and connecting pipework must be undertaken at ground level.

For guidance, please use the following:

**Air Testing using remote test bags: equipment required**
- 3 x 1 metre x 8mm Steel Drainage Rods
- 50mm Double Worm Screw for use with Steel Drainage Rods
- PVC sealing bags fitted with Schrader Valve and 6 metre hose
- Steel drain plug with testing point
- Bicycle Pump
- Tyre pressure gauge to ensure correct inflation pressure of the test bags

**Air Testing procedure**

1. Assemble drain rods to 3 metres in length with double worm attachment on end.
2. Remove as much air as possible from the PVC Sealing Bag.
   - Method: hold valve open and squeeze bag flat.
   - Tip: folding the bag in half to make it as small as possible will make it easier to locate.
3. Twist neck of PVC Sealing Bag into double worm attachment until it has firm grip on bag.
4. Ensure valve end of hose is secure with no danger of falling down the chamber.
5. Hold drain rods and hose from the PVC Sealing Bag together.
   - Start to lower the test bag into the base.
   - Tip: Keep hose tight while lowering bag. This helps to keep bag in place.
6. When bag is in chamber base, position it into the channel of the run to be tested.
7. By using the channel as a guide, slide test bag into the mouth of the pipe, and as far as possible into the pipe.
   - Method: use rods to push bag into position.
8. Leave rods attached (this ensures bag is held in position).
   - Start to pump the bag up using a bicycle pump.
9. If required, remove rods by twisting them in an anti-clockwise direction to release the double worm. Check the valve end of hose is safely positioned.
10. Place a similar sealing bag or a steel drain plug at the other end of the pipe length to be tested. (This could be another chamber or a terminal access point.) Both bag and steel drain plug must include a suitable testing point.
11. Attach a manometer. Carry out required air test method.
12. Remove sealing bag.

   **Method:** twist double worm attachment around the hose at ground level. Lower it down the hose, guiding the rods to the bottom of the chamber and once again grip the bag.

   **NOTE:** No requirement to grip bag tightly. This is simply to aid its removal. Release as much air as possible from bag. Then slide bag back out the pipe with the rods. When this is done, lift/remove all test equipment out of the chamber.

Maintenance

As with all Osma/Wavin Chambers, the smooth interior bore of chamber channels and associated pipe systems will aid the flow of water and waste through the system.

Because man-entry of Osma/Wavin chambers is not possible, maintenance work such as Rodding, Jetting and CCTV inspection must be undertaken at ground level.

Always follow the Health & Safety and Operational procedures of equipment suppliers.
