# VELUX Modular Skylights and Roofglaze

---

From inspiring design to straightforward installation

---

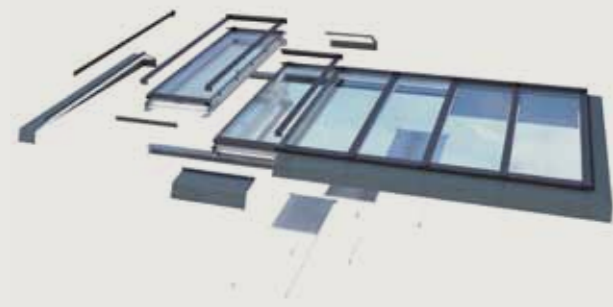

# The quality you expect from VELUX

## Now with the added expertise of Roofglaze

For your next commercial project you can enjoy twice the market leading expertise, twice the experience and twice the reassurance on your side.

VELUX Modular Skylights is an outstanding combination of design, functionality and performance, marking a significant leap forward in the evolution of skylights.

Roofglaze is one of the UK's leading installers of daylight solutions for private and public projects with a well earned reputation for reliable and easy installation and comprehensive after sales support.

Together we can offer the complete supply and fit package, giving you an elegant design that's easy to specify, and straightforward and safe to install – plus all the support and peace of mind you need before, during and after construction.

### The complete product

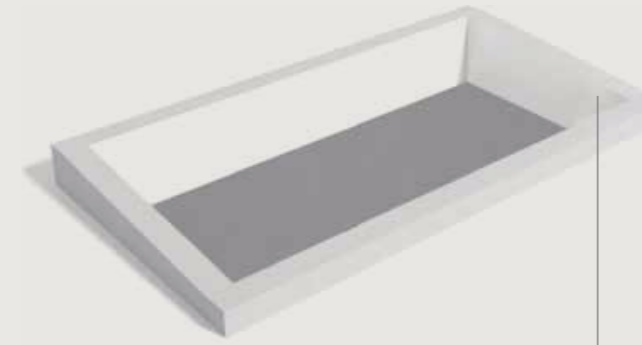

**Our VELUX Modular Skylights range is made from a unique, pultruded composite material that ensures excellence in energy, aesthetics and performance.**

- 100% modularity so it fits perfectly, is fully functional and easy to install.
- The stylish design means slim profiles, a flush exterior and an elegant appearance.
- The intelligent design means a hidden, almost silent, actuator chain and fully integrated internal blinds.
- The unique framing material guarantees a high insulating performance and one of the lowest overall U-values.

“Roofglaze understands the concept and ideas behind the VELUX Modular Skylights and with their installation capabilities, contracting knowledge and established supply chain position, we feel this will be the start of a mutually beneficial partnership.

Philip Beswick,  
VELUX Commercial Manager

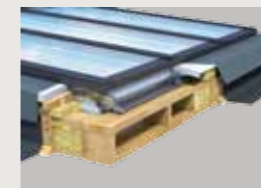

# The complete service

Our partnership with Roofglaze allows us to provide the full service – from designing our contemporary, adaptable skylights to providing an established, trusted installer to fit them.

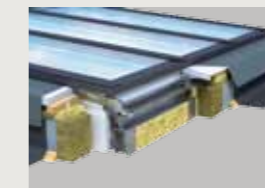

### Sub-construction

An accurate sub-construction means a trouble-free installation. VELUX Modular Skylights require an accurate fixed dimensioned substructure and Roofglaze can advise on the right approach to accommodate the unique modular installation system.

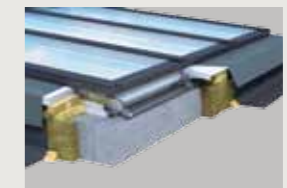

#### Timber

Timber remains the most flexible choice for creating a light and economical sub-construction with maximum energy performance. Not recommended for larger solutions and ridgetlight installations.

#### Steel

Steel offers flexibility in combination with great strength. Steel also permits the application to be installed with the maximum amount of insulation.

#### Concrete

Concrete provides a strong, but heavy sub-construction, mostly suited for concrete buildings. Concrete upstands are usually cast in-situ.

### A logical delivery

VELUX Modular Skylights are delivered in order of installation – each pallet is clearly marked, speeding up your workflow and saving you time on site.

### Quick and easy installation

Prefabricated modules allow for a quick and easy installation in all weather conditions – each piece is designed to integrate perfectly from day one, saving you time and resources.

“We are really excited about the potential of the newly formed partnership and are extremely impressed with their system. VELUX Modular Skylights are incredibly well designed, exceeding all current building regulation requirements and offer a truly innovative, intelligent solution for commercial buildings.

Richard Cliffe,  
Roofglaze Managing Director
