Unlike wood and traditional composite deckings, UPM ProFi Deck...

has a **fresh and modern stone like look**: for 2016, the new Pearl Grey is available, and Silver Green and Sunny Beige have been further improved.

is virtually **free of lignin**, the natural molecule which causes wood and other natural fibres to turn grey when exposed to sunlight.

is made with technical grade polypropylene specially chosen for **high impact resistance and hard wearing surface properties**. Solid decks which are made with polyethylene are typically 40% heavier and yet have similar bending strength.

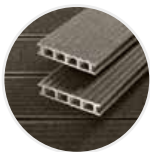

has a non-brushed closed surface: **wine, oil and other liquid spills are not readily absorbed** and can be easily cleaned.

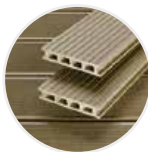

has **smart installation designed in**: perfect stairs & hard wearing edges are easily made with Rail Step, closed decks with toughened edges are achieved with Alu Rail, T-Clip Large allows 3-way fixing, and UPM ProFi Deck can also be installed flat (zero degree incline), without the risk of water stains.

designed made in **FINLAND GERMANY**
