SAFETY SECURITY PROTECTION

Cashfast

CASHFAST

Design

The Safetell Cashfast unit offers full protection for staff whilst providing a cost effective and reliable solution that allows easy transfer of cash, credit cards and goods whilst maintaining essential security.

The cash tray slides within the main drawer, allowing the passage of larger items (such as a 5 litre oil can) without the need for a second drawer or removable tray.

The insert tray incorporates a flat “signing area” for credit card slips or the use of chip and pin machines.

Construction

The Cashfast unit has a robust construction designed to withstand determined attack and vandalism (eg. drawer mounted on 160kg load slides).

The unit is supplied completed with a full duplex electronic speech transfer (incorporating a gooseneck microphone to the cashier’s side).

An induction loop for the hard of hearing may be added.

Operation

The cashier operates the drawer by hand on the rear top rail of the unit doing away with the need for a complicated handle mechanism.

Installation

Into prepared openings on a glazed shop front.

Options

An induction loop for the hard of hearing may be added

Finish

Full satin polished 316 stainless steel construction.

FEATURES

- Quick full protection for staff whilst allowing for the smooth transaction of money/goods
- Stainless steel finish
- Electronic speech transfer
- A minimum of moving parts ensures reliability
- The unit has two sizes of bin within the main drawer to accommodate a range of different sized items efficiently

APPLICATIONS

- Petrol Forecourts, Pharmacies
