

Hertalan EPDM accessories

Hertalan

Hertalan has been developing, producing and selling various synthetic rubber membranes of exceptionally high quality all over the world since 1965. Based on these membranes and a series of clever accessories and application systems, Hertalan supplies several systems for various constructional applications.

Expert advice

We advise clients, architects, contractors and roof covering businesses/fitters on the most suitable roofing system. We offer expert guidance and support: from application suggestions to design advice and processing instructions on-site.

Tricky details

There can be cases where fitters come across tricky details when processing the various Hertalan systems. Hertalan has developed a broad range of accessories especially for this purpose. Hertalan EPDM accessories are additional tools for the application of Hertalan EPDM systems.

Hertalan easy stick

Hertalan easy stick is a self-adhesive roofing strip. This is ideally suitable for the insertion of details (skylights, etc.) and roof gutters. *Hertalan easy stick* is self-adhesive and is applied without naked flame.

Hertalan easy stick Plus

Hertalan easy stick Plus additionally features a green EW welding strip for sealing with hot air. This is used mainly for the incorporation of skylights, chimneys, etc.

Hertalan flashing

Non-vulcanised EDPM rubber which can be flexibly moulded and which vulcanises in the open air. *Hertalan flashing* is frequently used for internal and external corners where standard solutions do not meet the requirements, such as with non-standard corners and large, rounded roof pipes.

Hertalan flash weld

Non-vulcanised EPDM rubber with a EW underlay. *Hertalan flash weld* is suitable for the same applications as flashing. The difference is that flash weld is fixed to the underlay with hot air rather than with adhesives.

Hertalan cover strip

Vulcanised EPDM strip with a EW layer over its full width. The *hertalan cover strip* is used mainly as a seam connector for the transition between two roofing strips or for T seams.

Hertalan rainwater drainage systems

A PE drain with non-reinforced vulcanised EPDM flashing attached to it, also available with a EW welding strip.

Hertalan prefab corners

Prefabricated EPDM internal and external corners. Also available with a EW welding strip.

Hertalan prefab pipe covers

Prefabricated EPDM roof pipe cover, including sealing ring for complete incorporation, also available with a EW welding strip.

Hertalan skylight sealing rings

Sealing ring including external corners for the incorporation of skylights, also available with a EW welding strip.
