

MASONRY SUPPORT SYSTEMS TO STEEL FRAMES

WINCRO WSC BRACKET SYSTEM

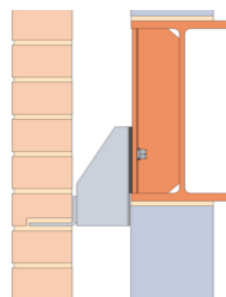

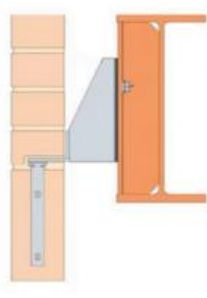

SOLUTIONS FOR FIXING TO STEEL FRAME

Wincro offer an extensive range of high integrity stainless steel masonry support systems, all designed to support the external leaf of masonry for all types of structure.

All systems are carefully designed by our Technical Design Team to suit the specific application and our optimization design method ensures the most cost-effective system is designed quickly and safely. Systems are designed to suit the masonry height to be supported, the cavity width and structural fixing position.

Various fixing solutions are available for fixing to steel frames and all Wincro support systems are supplied complete with isolation patches and neoprene washers to eliminate the effects of bi metallic corrosion.

Systems can be adapted to suit special masonry details including the support of soffit brickwork, atypical coursing positions and with cavity closures. Angles can also be supplied curved on plan to suit radiused masonry.

Onsite adjustment

Corrosion resistant stainless steel

Designs to Eurocode 3

Designed to suit your exact requirements

CE approved

Suitable for cavities over 40mm

Carry over 8m of brickwork
