

## Large Telescopic Sloping Through Wall Mailbox model 2002 - SBD Compliant

Generated on 14.07.2020

### Detailed description

The 2002 mailbox is suitable for storing A4 mail for front entry and rear retrieval. This letterbox is designed to be fitted through any wall or pillar with a thickness between 260–420 mm. It has a rear lockable door to keep post safe. The postman only has access to the front posting and only the resident has access to the retrieval.

A lot more discreet than a normal post-box and offers substantially more security with only the front plate showing and the chute makes mail pinching attempts very difficult. This product is approved by Secured by Design and suitable for assembly into banks.

### Product guidance - As Standard

#### Size (w x h x d):
