

## Excluda Black-Out Roller Blind

Generated on 23.09.2019

### Detailed description

The system is suitable for both new build and retrofit contracts.

Black-out fabric runs from a top roller, housed within an aluminium head box. This material runs in and is retained at the side within special matching aluminium side channels, where it remains in contact with double brushes to prevent light ingress. A further compressible brush is located below the bottom rail, to prevent light penetration at the base. Can also be used for blacking out horizontal and sloping skylights and rooflights.

The product comes with a 3 year 'fit for use' warranty.

### Product guidance - As Standard

#### Side channels:

Robust matching aluminium side rails, size 60 x 26 mm, complete with light-sealing brushes. 35 mm high bottom rail and compressible light-seal brush.

#### Fire resistance:

Standard and glass fibre fabrics manufactured to flame retardant standard BS 5438, method 2 and BS 5867-2, type B.
