

42 mm Galvanized Handrail System

Generated on 15.12.2019

Detailed description

The 42 mm Galvanized Handrail System is a modular, cast steel, component system. It is ideal for use in environments where pedestrian areas and walkways are adjacent to vehicle routes e.g. car parks, service areas and loading bays. The product offers pedestrian guidance and support whilst protecting the pedestrian areas and providing a barrier to vehicles.

It can be used to define pedestrian walkways and channel foot traffic away from vehicle routes. The system includes top rails, mid rails and upright posts which are supplied pre-assembled as mid, end and corner posts. Alternatively, the 50 mm Sleeved Handrail System can be supplied with yellow sleeved rails and black sleeved upright posts.

Product guidance - As Standard
