

Antipluviol S

Generated on 10.04.2020

Detailed description

Silane and siloxane based transparent water-repellent impregnating finish in a solvent solution. It provides colourless protection against rain for exposed concrete structures, cement renders, cellular cement, face bricks, exposed concrete blocks, natural and artificial stone, non-glazed ceramic tiles, etc.

Applications:

- Repair of plastered walls exposed to rain.
- Preventative treatment of exposed concrete against carbonation.
- Colourless water-repellent protection of historic buildings or those of special architectural; value.
- Water repellent treatment of walls and facebricks.
