

Fugolastic

Generated on 10.04.2020

Detailed description

Fugolastic is used as a substitute for water, to mix the cement based grouts Keracolor FF and GG, to improve the grout adhesion and mechanical strength and to reduce porosity and absorption. The system is a CG2 classified, improved cementitious grout, according to BS EN 13888.

Benefits:

- Improves compactness and provides greater resistance to abrasion.
- Optimal hydration of the cementitious binder and improved adhesion to the edges of the tiles.
- Less porosity and less absorption, meaning cleaning the grouts is easier.

Mapei (UK) Ltd

Mapei House
Steel Park Road
Halesowen
