

Mapefill GP

Generated on 10.04.2020

Detailed description

Mapefill GP is a pre-blended powdered grout based on high strength cement, graded aggregates with 1 mm diameter and special additives.

Benefits:

- Excellent impermeability to water.
- Excellent adhesion to iron and concrete.
- Excellent resistance to dynamic mechanical stress.
- Modulus of elasticity and thermal expansion coefficient similar to those of high quality concrete.
- Does not contain metal aggregates or aluminium dust.
- Non-toxic.
- Non-corrosive.
- Chloride-free.

Recommended for grouting voids in structural elements such as patching up honeycombs in concrete, filling gaps in precast elements and grouting base plates and bridge bearings.

Product guidance - As Standard

Consistency:

Powder.

Colour:

Grey.

Density:

2100–2300 kg/m³.
